

css{
/*exercices*/}

Blah, blah, blah...

The Box Model

*Margins, padding and borders are all part of what's known as **the Box Model**. The Box Model works like this: in the middle you have the content area surrounding that you have the padding, surrounding that you have the border and surrounding that you have the margin.*

The Box Model

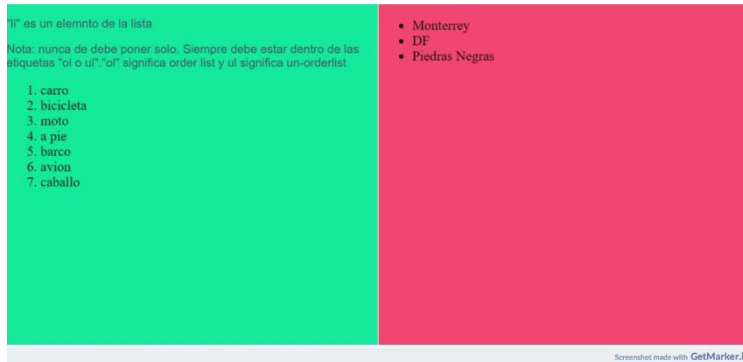

Screenshot made with [GetMarker.io](#)

You don't have to use all of these, but it can be helpful to remember that the box model can be applied to every element on the page, and that's a powerful thing!

Display property

Inline

inline does just what it says - boxes that are displayed inline follow the flow of a line. Anchor (links) and emphasis are examples of elements that are displayed inline by default.

Block

block makes a box standalone, fitting the entire width of its containing box, with an effective line break before and after it.

None

none, well, doesn't display a box at all,
